TA Beachflex

Joint Closure TA Beachflex is designed for harsh coastal environments. Joint Closure TA Beachflex is a complete system used for the transition between wire armoured submarine cables and/or land cable.

TA Beachflex consists of a T240 type TA mounted on a strain relief frame (stainless steel bracket). The cable entries to the joint closure are configured for a variety of applications, such as:

- **TAJ:** Joint between two submarine cables with capability of a future branch.
- **TAB:** Branch between two submarine cables with branching ground cable.
- **TAC:** Connection between submarine cable and ground cable.

The closure is equipped with cable strength member clamps, splice protectors, Multicassette, sea cable/ground cable bushing, hose clamps and bracket. Joint Closure TA is available in three different types, depending on the total number of fibres to be spliced. The number of fibres will determine the number of cassettes. Please choose a suitable joint closure for your fibre cables as specified in the table below. Together with a locking cap, the closure can easily be locked with a padlock. Depending on sea cable type add FIMT and potential equalizer (earth strap) kit.
