Joint Closure TMC

Facilitates mid-span access without the need to cut and re-splice all the fibres in the cable. The closure is delivered with one oval cable inlet, placed vertical, and has two open holes for customer adaptation, and is delivered without end plugs or bushings which are selected separately.

The closure is equipped with cable strength member clamps, splice protectors and cassettes. Joint Closure TMC is available in three different sizes, depending on the total number of fibres to be spliced and the number of fibres per cassette. The number of fibres will determine the number of cassettes.

Please choose a suitable joint closure for your fibre cables as specified in the table below. Brackets for attachment on walls, racks, in manholes or on poles, are available as options and ordered separately. Together with a locking cap, the closure can easily be locked with a padlock. The closure TMC is delivered with with the articles specified in the table below.
