Facts about extension closure T240-RAC

Tykoflex T240-RAC (Rapid Access Closure) is an extension closure that provides the possibility of providing a T240 with fiber optic quick connectors. T240-RAC consists of two spaces separated by a bulkhead where the quick connectors are located in one space, and the cable to the joint closure and cassettes in the other space.

Both spaces are sealed against the outside world and against each other. Access to each space can be managed by placing padlocks on one, the other or both v-clamps.

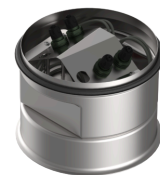

RAC fits most pan-type bottom parts of T240 and can be installed already in the factory, in connection with installation on-site or subsequently on an already installed T240.

T240-RAC is always customized where the number and type of quick connectors are adapted to the customer's needs. Therefore, T240-RAC is only sold directly by Tykoflex on request, and not through dealers.

Lockable with locking cover art no. 11218056, not included.

RAC kit

Can be delivered as a kit together with joint closure T240, cable sealings, Multicassettes, blind plugs etc.

Fits: Most pan-type bottom parts with up to four cassettes.

Capacity: The number of quick connectors depends on their size. For example, up to 6 expanded beam contacts can be accommodated, in Mini or Junior format.
